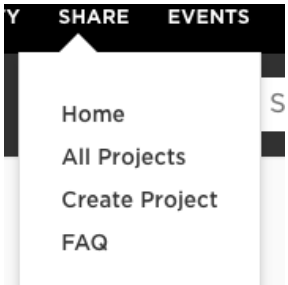
CreatorCon & Llamas!

A look at CreatorCon

This year's event was truly the hotbed of techie activities at Knowledge18! Developers and architects went under the hood with technical content and hands-on experiences. Around 5,000 developers attended more then 140 breakout sessions and workshops. Topics included Virtual Agent, MetricBase, IntegrationHub and more.

If you weren't able to make it in person, no worries at all! Lab guides, presentation decks and recordings on selected sessions can be found in the on-demand library and ServiceNow Community YouTube Channel.

Learn more about ServiceNow's Enterprise DevOps offerings, new mobile virtual chat agent, new mobile agent conversation builder, and llamas. Yes, you heard it right, llamas! Check out the 2018 CreatorCon Keynote.



A Better Share

Share is a place for ServiceNow developers to share ServiceNow utilities, scripts, and applications. Recently we revamped and brought Share under the umbrella of the Developer Portal. Now publishers can add screenshots and videos to their product detail page to give a taste of what the project entails.

For previous publishers on Share, log in to the new Share site to republish your project. If you need help migrating a project, reach out via the “Feedback” link in the upper right corner of the site.

In the past, Share was only available to ServiceNow customers and partners. Now, Share is available to all ServiceNow Developer Program members. Woohoo!

If you’ve never used Share, it’s a great place to find solutions to help you solve development problems. Log in with your Developer Portal credentials and get started - both with publishing and using the solutions on the site.

A great example of the wonderful content you can find on Share is the Xplore: Developer Toolkit, a perfect extension for developing applications on the Now Platform™.

CreatorCon Challenge

It all came together at Knowledge18

Three ISV startups were selected from more than 300 entries for fame and funding in the CreatorCon Challenge. Participants pitched their companies and apps built on the Now Platform to ServiceNow founder Fred Luddy and VC judges Om Malik and BK Lackland. The winner SalesWon, a Customer Relationship Management application suite that connects sales automation components with ServiceNow, and runners up Enable Labs, and Recruitlive took home $500K in funding from ServiceNow Ventures. Five other startups won VIP trips to Knowledge18 and a showcase in the Developer Hub.

Watch for the announcement of the next CreatorCon Challenge in September where we are seeking entrepreneurs to max out Now Platform London and pitch on stage at Knowledge19!

CreatorCon Hackathon

They Went Head-to-Head

On May 8th, 42 teams made up of our customers and business partners went head-to-head in the annual eight-hour CreatorCon Hackathon.

The first-place winner was Team Vocalize! Their winning app provides sentiment analysis of telephony conversations. The app impressed the judges so much, the team went home with prizes, the big trophy and major bragging rights!

CreatorCon Hackathon 2018 Winner's Webinar. Check out what the winning teams built and how they built it in less than eight hours. Get

inspired!

Get the play-by-play and relive the hackathon with the 2018 live blog

Mission to Mars

Giant Leap for Developer Kind

This year we launched a Mission to Mars programming competition in the CreatorCon Developer Hub area. We had almost 200 people compete to advance through the three rounds. The goal was to be one of the first to complete a series of Mars-themed challenges on Automated Test Framework, MetricBase (with real IoT devices) and finally IntegrationHub. The top three finalists walked away with their own Cozmo robots.

We're planning to take Mission to Mars on the road later this year. Watch the video to see what to expect. Hope to see you on Mars!

Developer Days

Develop on the Now Platform

ServiceNow Developer Days is an intimate two-day workshop at a ServiceNow office location near you. And it's free!

You will learn how to develop on the Now Platform, getting hands-on development experience as we guide and train you to quickly create business applications. At Developer Days, you will:

- Learn how to significantly reduce app development time and delivery
- Discover new platform innovations and capabilities
- Ensure your application framework is ready to rock out of the box!

Developer Days kicks off in Boston on July 25. The other Developer Days will be announced soon. Check back on the events page for more on Developer Days.

Learning Content

New training courses are now available on the Developer Portal.

If you use REST to integrate with ServiceNow, check out the new REST Integrations course covering inbound, outbound and scripted REST APIs.

The Automated Test Framework (ATF) course teaches you to automate testing right within the platform. Learn to configure, run, and automate tests in your environment.

Coming soon! Data visualization and Flow Designer courses are in the works and will be available shortly. Be sure to visit the Developer Portal regularly to see what new training is available.

TechNow Webinar

TechNow is the web series for ServiceNow developers and administrators that covers a variety of Now Platform topics.

Join more than 1,000 other attendees and the team to discuss everything from platform features in the latest release to best practices. With nearly 60 episodes over the last 5 years, TechNow presents ServiceNow experts discussing and demonstrating features such as Studio, debugging, JavaScript, forms and lists, APIs, workflows, source control, Service Portal and more.

Upcoming topics include:

- July - Script Debugger
- August - London Platform Features
- September - IntegrationHub Spokes
- October - Agent Workspace
- November - Virtual Agent
- December - Agent Intelligence

Behind the Scenes

No Trees Were Harmed

At CreatorCon, lab guides went completely digital - no paper. Workshop developers created the guidebook in a simple, lightweight markup language called Markdown and loaded the files to GitHub repositories. ServiceNow was integrated to read these repositories and build the guidebooks into the final online format. If you have yet to see the results, be sure to check out the CreatorCon workshops.

Developer Spotlight

Earl Duque
ServiceNow Developer at UC Davis

I am the system administrator and lead developer at UC Davis Information and Educational Technology. I oversee the administration and development across our instance and have expansive experience with Service Portal, Knowledge Base, and much more.

My career started in student affairs at UCLA in a non-technical role. My developer life started when worked on the business side of operations and began automating forms and Excel worksheets. I helped our database team with SQL queries and VBA scripts. Eventually, I switched full-time to ServiceNow development at UC Davis. The majority of my programming has been done within ServiceNow.

I am proud that I was selected as a finalist at the Knowledge 18 Hackathon as the only solo-member entry. I enjoyed hearing the audience laugh and get excited about the silly creation I made. Using functionality that already exists in ServiceNow (service portal, business rules, and live connect), I created a Zork-like MUD (multi-user dungeon).

At UC Davis I tripled our student developer team and personally mentored several students. At this moment, they are helping our team finish up quality assurance on development stories that we're releasing next week, some of which they developed themselves.

I originally entered ServiceNow with very little knowledge of the platform with the expectation to move an entire department's functionality into ServiceNow. If my story isn't a testament to how user-friendly and streamlined ServiceNow is, then I don't know what is! Get a personal

instance, think of a problem your team has now, and figure out some of your inefficiencies and improve them!

Outside of work, I love games - board games, video games, fantasy football, going outside and also playing pickups. Otherwise, I'm a sucker for food and then running to make up for the calories.
